Rope Ninja

Small ninja. Giant purpose.

Historical staged in-engine capture, Android 140 (September 27). Not a build 193 capture.

The giant's own body is the puzzle.

Knot, a child ninja with two golden threads, and Tansy, his fairy companion, restore colossal living Titans. Hook an object, throw it, or tie it to another. Carry fire along a rope and turn machinery against the Hush.

Current evaluation

Android internal 193: Moss Oak and Drift showcase, published October 18. The Brine Mother and Deep Sea King remain in source but are excluded from this bundle.

iOS 1.0 (928): available in existing TestFlight distribution. Publisher access must be arranged. Windows showcase 193 and validation notes.

Solar2D / Lua / Box2D. Touch and mouse. Premium, no ads planned. Twelve Titans are the funded target.

The existing proposal

$1.2M in three milestones: $400K for human media across four existing Titan designs; $350K for four new Titans; $450K for the final four and completion.

About 8, 16 and 24 months after funding. Marketing is additional publisher support. Rates remain estimates pending quotes.

The four-design rebuild baseline is broader than the two-Titan Android showcase.

The publishing request

A publishing partner for iOS, Android and PC, with funding to replace every AI-made media asset (art, voices, music and sound) with work by human artists, actors and composers, plus QA, localization and launch marketing. The IP stays with us. Launch about 24 months after funding.

How it is made

Current media is AI-generated, then selected, edited and integrated; code is largely AI-assisted. Linh designs and directs the game. Nothing is generated while playing. Asset-level rights and voice licences remain diligence items; no blanket clearance is claimed.
